MAJOR IN CHEMISTRY, CONCENTRATION IN BIOINFORMATICS

The purpose of this interdisciplinary concentration is to prepare students to enter computer-intensive fields of bioinformatics, computational biology, computational chemistry, and molecular modeling including genomics and proteomics. With the advent of the Human Genome Project, an explosion of genomics information has occurred and databases such as GenBank and EMBL have grown at a rate that now requires storage, organizing, and indexing of the information. Questions of gene expression have led to computational biology, the process of analyzing genomic sequences, and to the field of proteomics, the understanding of protein structure and function. The information obtained by computational biology and computational chemistry is used in the design of new drugs to treat a variety of diseases. Major drug and biotechnology companies are seeking people trained in bioinformatics.

Requirements for a Major in Chemistry, Concentration in Bioinformatics

Total Credits 87

1 Requires additional prerequisite courses beyond those required for the major and concentration.

Students must earn a C- or higher in all prerequisite courses in order to register for a chemistry or ancillary course.
